# Client/Server/Messaging Suite

Multilayered security for mail servers, file servers, and clients

Protect your mail servers, file servers, desktops, and laptops with a single, integrated solution. Trend Micro™ Client/Server/Messaging Suite provides a multilayered defense against viruses, spyware, spam, phishing, inappropriate content, and blended threats. In-the-cloud Web and File Reputation powered by Trend Micro™ Smart Protection Network™, protect against web-based malware, data theft, and lost revenue while reducing the burden of pattern file management. The suite can be remotely configured and managed for maximum IT efficiency.

## CLIENT/SERVER/MESSAGING SUITE COMPONENTS

**OfficeScan™ Client-Server Suite** protects desktops, laptops, servers, storage appliances, and smartphones—on and off the network—with an innovative blend of world-class anti-malware and in-the-cloud protection. New File Reputation frees endpoint resources by moving pattern files into the cloud. And Web Reputation blocks access to malicious websites. A flexible plug-in architecture, new Device Control, HIPS functionality, virtualization, and extended platform support all help lower management costs and increase flexibility.

**ServerProtect™** prevents viruses from spreading through the network by blocking them before they reach end users. It provides real-time, high performance protection for file servers, preventing them from spreading viruses, spyware, and other web threats to internal or external endpoints. Client/Server/Messaging Suite includes ServerProtect for Microsoft™ Windows™/Novell™ Netware and **ServerProtect for Linux™** to deliver cross-platform protection for heterogeneous networks.

**ScanMail™ Suite** stops viruses, spyware, spam, phishing, and inappropriate content at the mail server—the only central point for inspecting internal mail. ScanMail Suite for Microsoft™ Exchange delivers superior mail server security with new protections against blended threats, zero-day attacks, and spam containing malicious URLs. Tighter integration with the latest Microsoft platform and management tools helps streamline administration—delivering the industry's lowest total cost of ownership.

**Trend Micro Control Manager™** gives you greater control and more threat intelligence to optimize security throughout your business. This centralized security management console streamlines management and improves security for Trend Micro solutions with role-based administration, automated updates, alerts, and threat response. Unlike other solutions, Control Manager does not require additional client software.

## SOFTWARE

### Protection Points

- In the cloud
- Mail servers
- File servers
- Clients

### Threat Protection

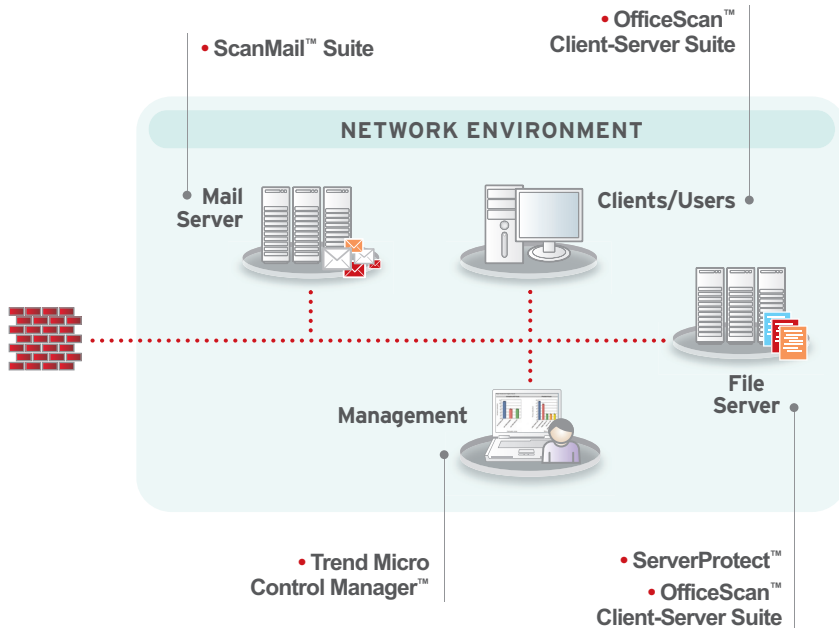

- Spam and phishing
- Inappropriate content
- Spyware and rootkits
- Viruses and trojans
- Web threats
- Worms and network attacks

## KEY BENEFITS

- Integrates client, server and messaging security in a single suite
- Reduces threat exposure with multilayered, multi-threat protection
- Delivers immediate protection with in-the-cloud threat intelligence
- Maximizes IT efficiency with centralized and automated management
- Offers enterprise-class scalability and configurability

### Client/Server/Messaging Suite Delivers Multilayered, Multi-Threat Protection

Client/Server/Messaging Suite features central management of multilayered security at the client, file server, and mail server to protect your business from a wide variety of threats.

### MINIMUM SYSTEM REQUIREMENTS

For the latest system requirements please refer to the **Client/Server/Messaging Suite Product Page** at:

>> <http://us.trendmicro.com/us/products/enterprise/client-server-messaging-suite/index.html>

### ALTERNATIVE SOLUTIONS

- >> NeatSuite™ Advanced
- >> OfficeScan Client-Server Suite

### EXPAND YOUR PROTECTION

- >> Prevent data loss with the **Data Protection Pack**
  - LeakProof™ 5.0
  - Message Archiver
  - Email Encryption Gateway
- >> Stop up to 99% of spam with **InterScan™ Messaging Hosted Security**
- >> **24x7 Support**
